Introduction

- Online Auctioning is an event in which products are sold to the highest bidder. It is the process of buying and selling products by offering for bid taking bids.
- The web-based system allows bidding for items. The users who desire to participate in bidding process must register themselves either a buyer or a seller.
- After registration the seller can add the product and schedule an auction and the buyer will place a bid.

Learnings

The entire experience of working on this project has been very rewarding as it has given us a great opportunity to learn new things and get a former grasp on already known technologies.

Tools and Technologies:

- Java
- HTML
- CSS
- Java Script
- SQL
- Spring Tool Suite
- Git

Skills:

- Planning
- Time management
- Team Collaboration
- Communication
- Problem Solving
